Global Summit 2018: Unconference topics to discuss

Global Summit will happen too soon, and I'm going to be there, as many of you I hope. You should [register](#) if still did not do it.

I think it is a good time to prepare for Unconference. I have some ideas about which topics I would like to discuss.

- [Share experience with Docker](#) - Already so long time since InterSystems officially supports Docker, I'm sure many of you already use Docker in some way, so share your good and bad experience.
- Next IDE/Editor - I think everybody already saw the news about [future of Atelier](#). I would like to speak about other possibilities how we could edit our code in any of InterSystems products. Which IDE as a developer you use mostly with other your programmatic languages, what do you think if you could use the same code editor/IDE for InterSystems ObjectScript as well.
- Support for OpenSource projects - I think InterSystems could do more for the OpenSource projects. Let's I have some OpenSource projects with some issues, which I would like to solve with WRC, but I can't. Licenses, and so on. Microsoft is a proprietary company and the leader in OpenSource.

What to do you think about my topics? Share your ideas. And see you there.
