Issue with output file format

I am having an issue with the output file format on a production where quotes (" ") around column values are being removed from the imported file. For example, my input file is a csv formatted as such: "123", " ", "ABC". The output file format that is being generated produces: 123, , ABC. I need the output file to retain the quotes around the data.

Is this something that can be corrected in the record map? Or is it an issue elsewhere?
