## EnsLib.HL7.Operation.FTPOperation- Variable Length Format

Hello,

I am trying to send a HL7 Billing Batch 2.3:FHS file out to an FTP site:

The file needs to be in Variable Length / Carriage return carriage control format--

When I send the file, the format is Fixed Length 512 Byte Record-- Not Working

The data is ok within the file-- It is just the way I am sending it out of Ensemble that is not correct.

I am thinking that it is a setting within the Operation that I am missing or not choosing correctly.

Charset-AsciiCR

Separators -|^&/

Default Char Encoding: Binary

I appreciate the help,

Herb

Record format: Fixed length 512 byte records

Record attributes: None

\*\*\*\*\*

Record format: Variable length, maximum 0 bytes, longest 276 bytes

Record attributes: Carriage return carriage control
