How to pass JSON body as part of a HTTP Status 404 Response message

404 Not Found

```
{
  "error": {
    "errors": [
      {
        "domain": "global",
        "reason": "notFound",
        "message": "Not Found"
      }
    ],
    "code": 404,
    "message": "Not Found"
  }
}
```

I want to do something like the above sample from a Google Storage JSON API. I have a call to `Write obj.%ToJSON()` followed by `return ..ReportHttpStatusCode(..#HTTP404NOTFOUND)` however the HTTP Status code is always 200. If I remove the `Write obj.%ToJSON()` statement it returns a 404 status with no body. How do I return both?
