I want to use the administration portal

Since I installed CACHÉ with mac, I can not use CACHÉ CUBE, so I put windows 10 in the virtualbox, installed CACHÉ and made cube usable.

The problem is,

When you press the cube mark,

- studio
- Terminal
- Management Portal
- Remote system access
- Preferred connection server (F) [TRYCACHE 2]
- Cache version management (b)
- End (x)

Inside of the above

- studio
- Terminal
- Management Portal (P)

Can not be selected.

Why?

The purpose of using CACHÉ is to refurbish existing projects.

You can change, repair, or delete CACHÉ by clicking on CacheClientX64 and selecting an instance. To continue please click Next. Click on Next. Check on change, next, at custom setup

- CACHÉ launcher
- CACHÉ Studio
- XDBC
- CACHÉ application development
- document

Are arranged side by side,

All This function and all sub functions are installed on the local hard disk. . Then,
Click Next.

I am ready to change the program.

Action: Upgrade

Instance name: TRYCACHE1

Installation directory: C: /

Is displayed and click installation.
