How to Open Terminal In Caché Mac OS

HI,

I am a newbie so excuse my basic questions.

I have installed Caché on Mac Os High Sierra 10.13.6 and have started the ObjectScript tutorial but I cannot open Terminal in Caché.

The instructions provided on the tutorial don't appear to be for Mac OS as there is no cube icon:

n order to begin practicing using ObjectScript, you need to start the Terminal. Click the Caché cube icon in the task bar and select [Terminal](#) from the menu. This brings up the terminal window, and you can see from the prompt that we are in the [USER](#) namespace. Namespaces are logical directories, containing routines (programs) and globals (data).

So my question is how do I open the terminal window in Caché, I have navigated to the user and samples directory in Terminal window but the ObjectScript commands are not recognised :

`\Cache\mgr\samples\`

Thanks

[#Caché](#) [#Terminal](#) [#ObjectScript](#)
