## Terminal Access Denied

Hi,

I have been using evaluation version of Cache 2017.2, it was working fine and I was using Cache studio, SMP & Cache Terminal/console till yesterday.

Today, cache was in shutdown status, then I restarted. But, Cache terminal is not working and showing as Access Denied while otherthings like studio and SMP is working as expected. I checked all security level services on SMP, all are fine and enabled.

Can anyone help me to diagnose the problem and make it working.

Thanks.
