Time Loop in Cache Object Script

Hello,

I am a beginner with Object Script and I hope anyone can help me solving my questions.

1. Is there a way to time a loop in Object Script?
2. My code leads to the following error, even though it executes the method.

Is there a way to ignore this specific error, so that I can repeat my code in a time loop over and over again without stopping?

```
<<THROW>%CreateProperty+85^%DocDB.Database.1 *%Exception.StatusException FEHLER #5805: Der ID-Schlüssel ist nicht eindeutig im Extent '%Dictionary.PropertyDefinition' : '^oddDEF("db.stream","a","Datum")' ist bereits vorhanden. Speicherort des ID-Zählers = ">
```

Thank you in advance and best regards
