Creating Custom Dashboard/Monitor

In looking at the Production monitor within Ensemble, I was wondering if there is a way we could customize it for our use. I notice it is basically a dashboard.

For example I would only like to truly display those Services, Processes, and Operations that are truly in dire need of attention. The Monitor out of the box just seems too busy, and I would like to simplify it.

I was trying to find a sample how a Monitor Dashboard would be setup, but I am not seeing anything in ENSDEMO, or SAMPLES. Has anyone created a Custom Dashboard/Monitor for their purposes? Would you be willing to share an example with me?

Thanks

Scott Roth
