W # prints '28' rather than clearing the screen

All,

Recently, a Cache 2017.2.2 system started printing “ 28 ” rather than clearing the screen when doing a “ W # ” in programmer mode.

Does anyone have any idea how this could happen?

This should clear the screen, but doesn't:

```
XXXX:YYYY>W #
```

28

[#Cache](#) [#OpenVMS](#) [#System Administration](#)
