## Use parameter in Select Component

Hello everyone,

I want to fill data into my select component with sql request and parameter.

I tried to follow this example <https://docs.intersystems.com/latest/csp/docbook/DocBook.UI.Page.cls?KEY...>

I need to call a method because my parameter can be different. I tried something like this but it doesn't work...

```
ClientMethod changeParams() [ Language = javascript ]
{

var query = zenPage.getComponentById('categorieBeneficiaire');
query.setProperty('parameter', 1, 'OS');
query.setProperty('parameter', 2, 'NSAL');
}
```

or like this :

```
ClientMethod changeParams() [ Language = javascript ]
{

var query = zenPage.getComponentById('categorieBeneficiaire');
var param1 = zenPage.getComponentById('catBParam1');
var param2 = zenPage.getComponentById('catBParam2');

param1.value='OS';
param2.value='NSAL';
    query.executeQuery();
}
```

You can see my select here :

```
<select id="categorieBeneficiaire" label=
"Catégorie bénéficiaire " sql="SELECT row FROM mytable where cond = ? and cond2= ?
" required="true" >
    <parameter id="catBParam1" />
    <parameter id="catBParam2" />
</select>
```

## Use parameter in Select Component
