How to highlight ObjectScript in a Post

Hi!

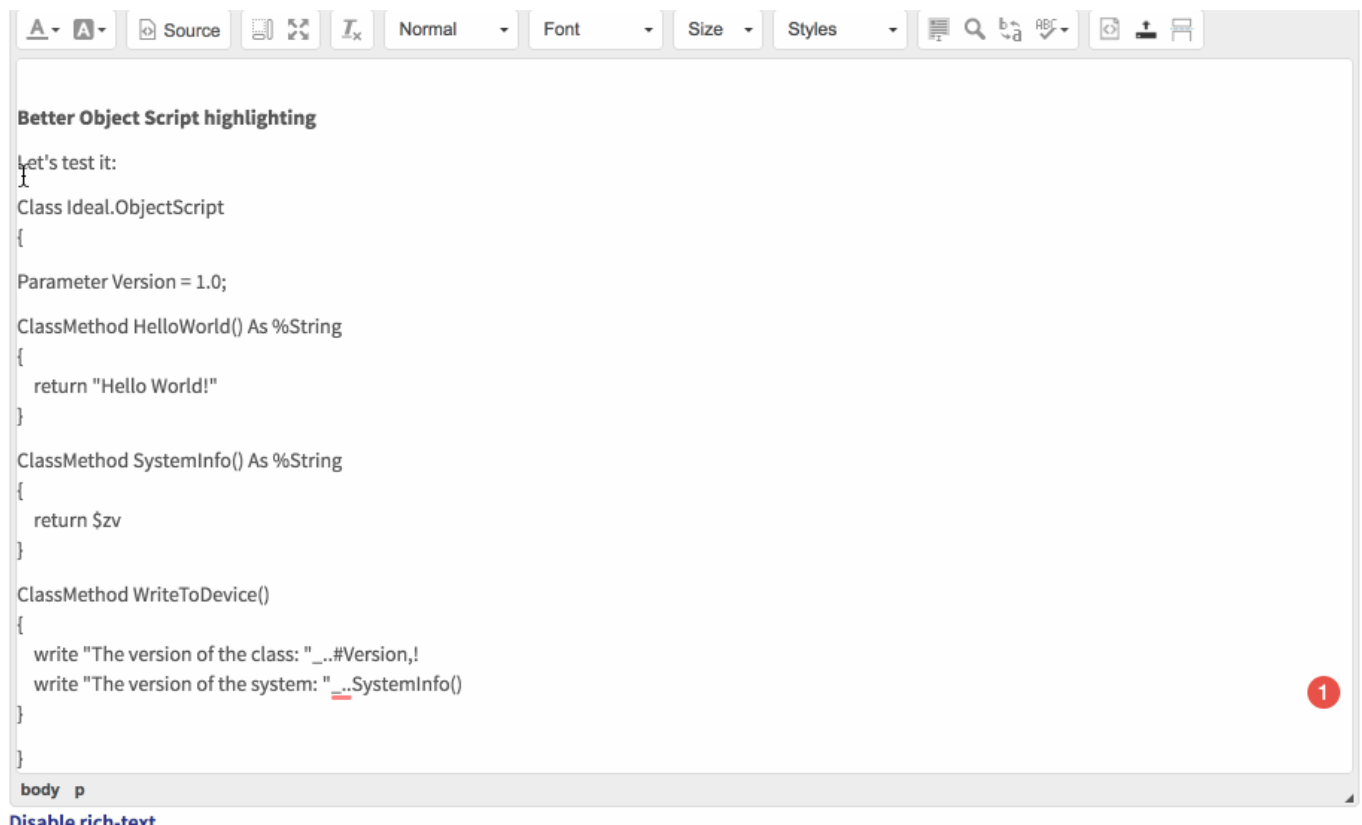

Sometimes you need to put formatted ObjectScript in a post.

To do that put the code into the editor, select it and click on ObjectScript button.

Once you save/preview the post the code will be highlighted as ObjectScript.

See the gif:

If you use Markdown editor, you can highlight ObjectScript if you place the code inside two tags: `<pre><code> ... your code... </code></pre>`
