Is Business Service creation date/time and user logged anywhere

I am trying to find out when a Business Service was created, and by who. I have reviewed the audit trail and it doesn't appear that this information is actually logged there. I am hoping that this might be logged in a SQL table or global someplace. I have reviewed the SQL tables in that namespace and have come up empty. I thought it might be located in EnsConfig.Item, but that table is sparse.

Anyone know where this information might be logged?

Thanks, Jim
