Import Ensemble backup into Iris

Hello,

We are trying to migrate all our production to new IRIS servers. To test everything is working fine, and to be able to script the process, we want to import the data into new IRIS servers using a backup file (created with ^BACKUP). But we've found that IRIS doesn't recognize Ensemble backups so we can't import it using ^DBREST :-O

Any of you know how to import in IRIS an Ensemble backup file?

Thanks a lot,
David
