BPL - Foreach IF statement

As part of a BPL I am building I need to foreach over a some repeating elements and look for a certain value, if said value is present I need to forward the message to another operation.

I can't seem to get the if statement inside the foreach loop to work and I think I am doing something wrong?

The error message I am getting:

```
ERROR <Ens>ErrorException: <UNDEFINED>zS2+2^GWH.Messages.Eobs.AKISegmentCheck.Thread1.1 *k1 --  
logged as '-' number - '@' Set k1=request.GetNextIndex("PIDgrpgrp("(1)").ORCgrp()",k1,.tSCTrans)
```

Can anyone explain that error to me?

Cheers
