## Using DoesNotIntersectList with Lookup Tables in Routing Rule

Hi, all.

I know this is basic, and I think I have done this before, but I haven't been successful this time.

In a Routing Rule, I would like to take the value of MSH:9.2, see if that value does NOT exist in a lookup table, and ultimately return out of the rule if true.

So, if my message is an "A05", but "A05" is not in a particular lookup table, then it evaluates to 1, and I execute my action of "Return" and the rule ceases processing.

Is there something incorrect with my sample code below?

..DoesNotIntersectList(HL7.{MSH:9.2}, "ValidAdt.lut")

Thank you in advance for any insight!

Bill
