How do I specify System Default Setting for Production setting

Added new System Default Setting for Production (not Host) setting.

However, Production setting is still the same. I have tried restarting Production and instance, to no avail.

How do I specify System Default Setting correctly?

System Default Settings currently defined in namespace ENSDEMO:

Production Name	Item Name	Host Class Name	Setting Name	Setting Value	Deployable
*	*	*	try	123	No

Production:

The screenshot shows the 'Production Settings' window. At the top, there are tabs for 'Settings', 'Queue', 'Log', 'Messages', 'Jobs', and 'Actions'. The 'Settings' tab is selected. Below the tabs, there is an 'Apply' button, a dropdown arrow, a document icon, and a 'Search:' field. The main content area is divided into two sections: 'Informational Settings' and 'Basic Settings'. Under 'Informational Settings', there is a 'Description' label and a text input field. Under 'Basic Settings', there is an 'Actor Pool Size' label and a text input field containing the value '2'. Below this, there is a label 'try' and another text input field.
