InterSystems Cache with Laravel (Eloquent) using ODBC

Hi Community

I have created a simple package that allows the use of Cache with the [Laravel Framework](#).

From my initial testing everything seems to be operating smoothly but I would like to appeal to the PHP users in the community to help me improve this package.

For those of you out there who have time and would be interested in this, please visit the repo at <https://github.com/jeandormehl/laracache>

Thanks in advance
