

# Unable to connect Atelier to IRIS on AWS Cloud with BYOL License

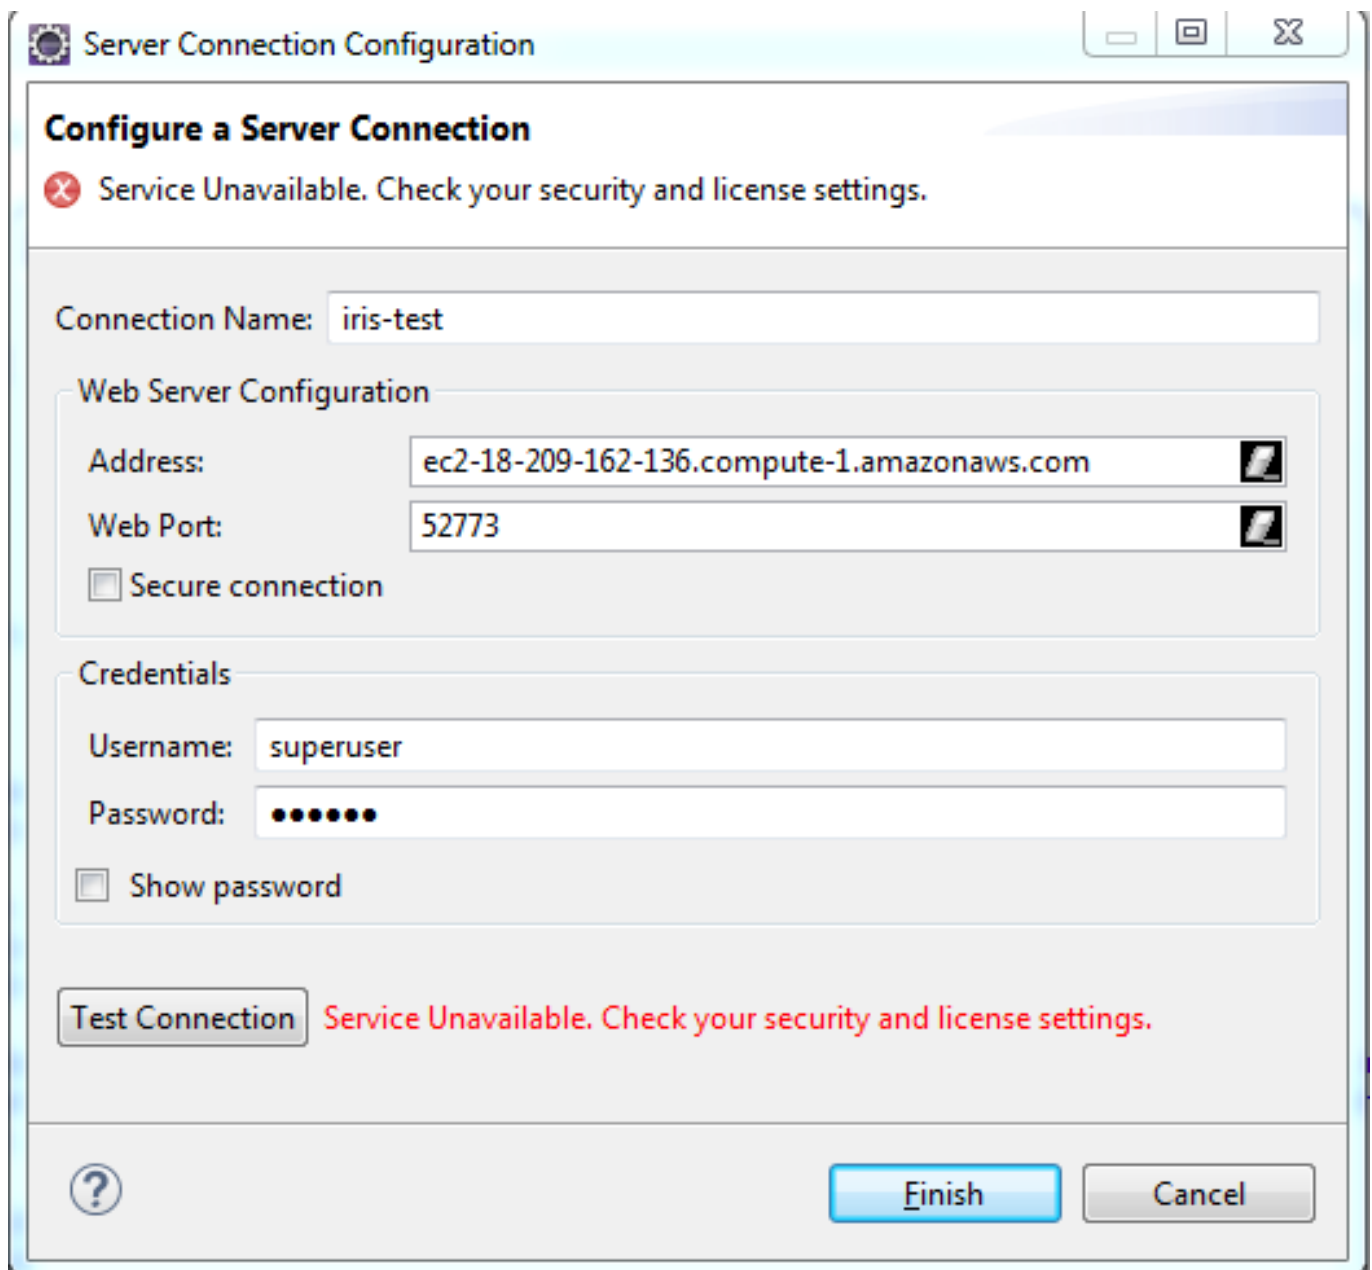

[Evgeni Petrov](#) 10 December 2018

[Cloud](#), [Atelier](#), [InterSystems IRIS](#)

Hello experts,

I am new to IRIS and I was told I could get a great hands-on experience with the community edition that is currently available on multiple cloud providers.

Unfortunately connecting Atelier to the given IRIS instance has been unsuccessful:

According to [this troubleshooting guide](#):

## Unable to connect Atelier to IRIS on AWS Cloud with BYOL License

Published on InterSystems Developer Community (<https://community.intersystems.com>)

---

- A single-user license is not sufficient to run Atelier.

According to my License Key:

License Type=Single Concurrent User

And my license use is at 100%:

LICENSING	
License Limit:	1
Current License Use:	100%
Highest License Use:	100%

How am I supposed to connect and test IRIS if the Community Edition does not provide a sufficient license?

Am I missing something else?

Thanks,

Evgeni
