Unable to connect Atelier to IRIS on AWS Cloud with BYOL License

Hello experts,

I am new to IRIS and I was told I could get a great hands-on experince with the commuity edition that is currently availabe on mutliple cloud providers.

Unfortunately connecting Atelier to the given IRIS instance has been unsuccessful:

Accorording to this troubleshooting guide:

- A single-user license is not sufficient to run Atelier.

According to my License Key:

  License Type=Single Concurrent User

And my license use is at 100%:

How am I supposed to connect and test IRIS if the Communty Edition does not provide a suffiscient license?

Am I missinng somehitng else?

Thanks,

Evgeni
