Adding fault to a wsdl

Hi,

The fault message definition is missing from my service WSDL. I would like to add these bold styled text to my WSDL. How can I do that? The aim is when I get the WSDL of MyService with ?wsdl URL the response contains the bold styled text.

For example:

```
<message name="MyFault">
  <part name="MyFault" element="s1:MyFault"/>
</message>
<message name="myOperationSoapIn">
  <part name="myOperationRequest" element="s1:myOperationRequest"/>
</message>
<message name="myOperationSoapOut">
  <part name="myOperationResponse" element="s1:myOperationResponse"/>
</message>
<portType name="MyServiceSoap">
  <operation name="myOperation">
    <input message="s0:myOperationSoapIn"/>
    <output message="s0:myOperationSoapOut"/>
    <fault message="s0:MyFault" name="MyFault"/>
  </operation>
</portType>
<binding name="MyServiceSoap" type="s0:MyServiceSoap">
  <soap:binding transport="http://schemas.xmlsoap.org/soap/http" style="document"/>
  <operation name="myOperation">
    <soap:operation soapAction="http://test.com/ns/MyService/v1/myOperation" style="document"/>
    <input>
      <soap:body use="literal"/>
    </input>
    <output>
      <soap:body use="literal"/>
    </output>
    <fault name="MyFault">
      <soap:fault use="literal" name="MyFault"/>
    </fault>
  </operation>
</binding>
```

Thanks,

Dénes
