Mirror Monitoring issue, status saying down even if it is running

Hi, would really appreciate your advice on how I can restart the mirror-monitor. I've followed the instructions and restarted the mirror monitor, and still the status seems to be down. Can you point me to some resource or steps that I can follow ?

I logged into %SYS terminal and restarted the mirror monitor and it says that it is running

Mirror Member Status

Member Name	Member Type	Status	Journal Transfer	Dejournaling	X.509 DN
