SQL Privileges management

Hi,

When Creating a custom security role, what privileges do I need to add to it, in order for the users that I grant him the role, to be able to use

dynamic SQL to perform read only queries on all tables in a namespace?

I have a security role, that contains the %ServiceSQL privilege,

And yet when I connect to a terminal and try to run an SQL query using dynamic SQL , I get a "user is not privileged for the operation" error.

reading the documentation , I understand that %ServiceSQL privilege is not enough, but I don't understand what privilege to add,

I can't add specific tables in the "SQL Tables" section of the role definition, I need all the tables to be accessible.

this the documentation I mentioned:

<https://docs.intersystems.com/latest/csp/docbook/DocBook.UI.Page.cls?KEY...>

Regards,

Nael
