Secure Connection - Atelier 1.3

Hello everyone,

I'm using Atelier 1.3. When we configure a server and use HTTP to connect, works fine. But when we activate the Secure connection option I get the Unregonized SSL message, plaintext connection?

Do I need to perform any configuration on my server so that Atelier can access a secure connection?

Server Connection Configuration

Configure a Server Connection

✖ Unrecognized SSL message, plaintext connection?

Connection Name:

Web Server Configuration

Address:

Web Port:

☒ Secure connection

Credentials

Username:

Password:

☐ Show password

Test Connection Unrecognized SSL message, plaintext connection?

Finish **Cancel**
