# Business Operation to Integrate with Amazon S3 , How to send File to Amazon S3 using HTTP Outbound

Hi All,

I created a Business Operation to Integrate with Amazon S3.
I have used HTTP Outbound Adapter for the same. Used Get method of Adapter Class.
Basically in a request I want to send Unique File Name and File and in Response I want to get Version ID and if operation was successful, then set flag to true.

I have created a class for request in that I have two properties, as shown Below :

```
 Property fileName As %String;
 Property file As %GlobalBinaryStream;
```

This is in my Operation Class

```
 set pResponse = ##Class(SaveFileResponse).%New()
 set fileName = pRequest.fileName
 set file = pRequest.file

 set tSC = ..Adapter.Get(.HttpResponse,"filename",fileName)
 if (HttpResponse.StatusCode = 200) {
 set pResponse.fileSaved = 1
 set pResponse.fileVersionID = HttpResponse.ContentInfo
 }
 else {
 set pResponse.fileSaved = 0
 }
```

I have also created Business Operation in Production and configured URL and HTTP Configuration and SSL Configuration in Settings for the same.

Is this all correct ? Is my approch okay ?

Kindly help me on this .
