# How to extract data from Hive into IRIS?

Hi guys,

I have a customer trying to extract data from Hive. I've tried to use Data migration to migrate a table into IRIS with JDBC driver. But the migration task always fails as below

Then I tried to create a link table, the task fails too with the following error:

Background task error log details:

	Type	Error Number	Error Text	Row
»	消息	0	hdr_lab_report: 错误 #5414: 无效索引属性: xu.hdrlabreport::MainIndex::inpatientid, Stream property is not allowed in a unique/primary key/idkey index > 错误 #5030: 在编泽类xu.hdrlabreport时出错	1

I've tried several ID combinations such as rowkey+userid, userid + datatime, the results are all errors caused by stream property.

The source table are composed of only Hive string fields.I wonder how may I migrate Hive tables into IRIS. Thanks.

#InterSystems IRIS
