AWS SES (Simple Email Service)

I am just curious if someone has used this service to send Alert emails through AWS /Ensemble

I have verified 2 email ids - One to send. One to receive

Have also configured an access key for the email smtp server and added the credential to ensemble

but I get this error

ERROR #6033: Error response to SMTP MAIL FROM: 530 Authentication required.

email-smtp.us-east-1.amazonaws.com

25

So my first opinion is the authentication is not happening via the credentials settings. It needs to be passed in a different way

If anyone has done it before. Do let me know

It's Ok I figured it out.

I am keeping the post in case someone else needs help

[#AWS](#) [#Ensemble](#)
