Determine if Namespace is Ensemble enabled and logging to console log file

Hi everybody,

I am looking for a way to detimerine if a certain namespace is ensemble enabled. I´ve seen such a solution somewhere in the past but can´t find it anymore. Is there a simplistic api around for that?

My second question is in context of log some information to the console log file with a certain error level. Also, I´ve seen this in the past and can´t find it agian. I guess there was some kind of simple api to use for this.

Thank you for your help.

best regards,

sebastian
