Survey: using Tableau or Power BI with InterSystems products

Hi,

As we [announced](#) at our Global Summit in October, we are developing dedicated connectors for a number of third-party data visualization tools for InterSystems IRIS. With these connectors, we want to combine an excellent user experience with optimal performance when using those tools to visualize data managed on InterSystems IRIS Data Platform.

If you are already using Tableau or Power BI products to access our data platform through their respective generic ODBC connectors today, we're interested in learning more about your experiences thus far and would be very grateful if you could spend a few minutes on our survey.

- [survey for Tableau users](#)
- [survey for Microsoft Power BI users](#)

Thanks,
benjamin
