HL7 ACK Date and Time Format

Hi.

We have created an Ensemble production that receives HL7 information via TCP Adapters, but the requirement from the vendor is that we submit an ACK message with the MSH segment mist have a date and time populated with seconds.

We are utilising the standard class for the Service Adapter (EnsLib.HL7.Service.TCPService).

HL7 Version 2.5 no modifications currently.

The messages received via the service is correctly received in ddMMyyyyhhmmss but our ACK back is only ddMMyyyyhhmm.

Due to the ACK not having the ss the message is rejected by the vendor.

Ps: Our interface is using ACK Mode - Immediate

#HL7 #Red Hat Enterprise Linux (RHEL) #Ensemble
