Http Request NTML Auth

Hi I'm using ensemble/cache 2016 is a NTML auth possible. Any code examples?

Currently I've got

```
set hr3 = ##class(%Net.HttpRequest).%New()
set hr3.Username = "xxxxxx/xxxxxxxxxx"
set hr3.Password = "xxxxxxx"
do hr3.Get("http://xxxxxxxx/CaseNoteTracking/api/CaseNoteTrackingAPI/Get")
```

From the looks of things I need a http 1.1 request?
