JDBC batch insert

Hi, I'm looking for a way to implement the JDBC pattern "executeBatch" in ObjectScript:

<https://www.tutorialspoint.com/jdbc/jdbc-batch-processing.htm>

Since Ensemble 2017.2.2 there is a new method called executeParametersBatch :

<https://docs.intersystems.com/ens20172/csp/docbook/relnotes/index.html#D...>

Even in the Ensemble 2018.1 change log, mention a patch on this method:

<https://docs.intersystems.com/ens20181/csp/docbook/relnotes/index.html#J...>

Do you have any examples or tracks to use the executeParametersBatch method of %Net.Remote.Java.JDBCGateway?

Otherwise have you found other workaround for batch insert in JDBC through an EnsLib.SQL.OutboundAdapter?

Thank you in advance for your answers.
