How can i connect to a server with Terminal(not through telnet)

hi, everybody!

i wanna connect to a remote server through Terminal.

after i add a server in [Preferred Server] and click the server name([Remote System Access]->[Terminal] -> server name)

i got an Error dialog telling me that:

Failed to establish security context.

Reason:(-2146893042, 0x8009030e)No credentials are available in the security package

so do i miss some configuration?

Grateful for your help!
