Issue Using Public Key Infrastructure, browser error

Hi, a client have a installed enviroment with mirror activated, but when you test SSL on webservices you can get an error, not SSL access correctly from browser because certificate problem apparently with TLS Version, someone have a suggestion to reinstall SSL Certificates on mirrors ?

Chrome : something wrong, no details or diagnostic

Firefox : SSL_ERROR_HANDSHAKE_FAILURE_ALERT

We try simple regenerate Authority an regenerate all certificates, but not worked. Same results.

[#SSL](#) [#System Administration](#) [#Ensemble](#) [#InterSystems IRIS](#)
