REST API Post Header and Body

Hi

I'm trying to send a request to a REST API Service.

I'm using this code (Adapter is "EnsLib.HTTP.OutboundAdapter")

```
Method Put(pRequest As SIGE.Grupo.BO.Operation.putRequest, Output pResponse As SIGE.Grupo.BO.Operation.putResponse) As %Status
```

```
{
set tSC = $$$OK
```

```
try
{
```

```
set tFormVar="Content-Type,apikey"
  set tContent="application/json"
  set tApiKey="somekey"
```

```
Set tOut=##class(%IO.StringStream).%New()
set tSC= ..ObjectToJSONStream(pRequest,.tOut)
```

```
Set tSC=..Adapter.Put(.tHttpResponse,tFormVar,tContent,tApiKey,tOut.Data)
```

```
If $$$ISERR(tSC)&&$isObject(tHttpResponse)&&$isObject(tHttpResponse.Data)&&tHttpResponse.Data.Size {
Set tSC=$$ERROR($$EnsErrGeneral,$$StatusDisplayString(tSC)_":_"_tHttpResponse.Data.Read())
}
Quit:$$$ISERR(tSC)
```

```
}
catch
{
  Set tSC=$$$SystemError
}
quit tSC
}
```

but I got a missing message alert from the REST Service

Also, I tried with this `set tFormVar="Content-Type,apikey,cur"` but I got a duplicate apikey message.

This is the right way to send a header and body to a PUT operation in REST API?

Thanks & Best Regards

Sergio
