%String to XML

Hi

I've got a string variable which I need to convert into a XML one.

My main goal here is to use the XML bit I've extracted from a HTML file in a message I need to pass over to an operation.

I'm doing the following which always errors

```
classMethod WriteNodes(myfile As %String)
{
  Set status=##class(%XML.TextReader).ParseString(myfile,.reader)

  ....
```

Any easy way of making this happen?

Kind regards
