Give external users access to a CSP-pages

Hi!

I have a question if it possible to let Ensemble manage user rights from AD-user group?

What i want is to let external user have access to certain CPS-pages to read information. But not let them have access to Ensemble it self. And instead to set up individual accounts in Ensemble for each one of them i rather want to have dem in an AD-securitygroup.

Is that possible and also limit them only to choosen CSP-pages?

I'm not a administrator of our platform, i'm just developpe productions so i would be grateful for information i could bring to our tech-guys and ask them to set it tup, if possible.

Regards,

Michael
