Compilation error on %ExtentMgr.GlobalRegistry.LockUse

I'm getting this compilation error:

```
Kompilieren der Klasse digi.packet  
FEHLER #5002: Caché-Fehler: <FUNCTION>zLockUse+5^%ExtentMgr.GlobalRegistry.1  
> FEHLER #5030: Während der Kompilierung von Klasse 'digi.packet' ist ein Fehler aufgetreten
```

when importing one of my classes on the production server into one particular namespace:

- the class compiles just fine on dev pc.
- the class compiles just fine also in any other namespace of the same cache instance. So, looks as a problem of this particular namespace.
- the project contains many other classes, all are compiled in all namespaces without any problems.
- Cache for Windows (x86-64) 2017.2.1

Google gives me one similar issue but seems it is not my case: <https://groups.google.com/forum/#!topic/intersystems-public-cache/kGRj3L...>

Can someone shed some light on this?
