Entity Framework Provider issue when "Support Delimited Identifiers" is turned off

I'm attempting to use the .NET Entity Framework provider that is provided by InterSystems (see: <https://docs.intersystems.com/latest/csp/docbook/DocBook.UI.Page.cls?KEY=GBMPeframe>). In our environment, the "Support Delimited Identifiers" option is turned off and we are not allowed to turn it on without significant testing effort. When this setting is off, the SQL that is generated by the Entity Framework provider is not considered valid and therefore the provider doesn't work (it DOES work, however, when this setting is turned ON).

Do you know of any way to work around this issue? Again, we don't have the option of turning the "Support Delimited Identifiers" option ON unfortunately.
