Hello

- First I thought it would be very simply with bash, but ...
- if I want a header in the csv file
- if you export with GOGEN more globals together not only one
- if I want a csv file for every global/indexes has the global ..

Example:

For a EXPORTED.GLO file

[illegible]

The script generates 3 csv files. One for regs with 3 index, other for regs with 4 index and another one for 5 index:

- global ALD with 3 index
global-EXPORTED3.csv

Index1; Index2; Index3; Data1; Data2; Data3; Data4; Data5; Data6; Data7; Data8; Data9
; Data10; Data11; Data12; Data13; Data14; Data15; Data16; Data17; Data18; Data19; Data20; D
ata21; Data22; Data23; Data24; Data25; Data26; Data27; Data28; Data29; Data30; Data31; Dat
a32; Data33; Data34; Data35; Data36; Data37; Data38; Data39; Data40; Data41; Data42; Data4
3; Data44; Data45; Data46; Data47; Data48; Data49; Data50; Data51; Data52; Data53; Data54;
Data55; Data56; Data57; Data58; Data59; Data60; Data61; Data62; Data63; Data64; Data65; Da

Data116 is the max number of columns that registers with 3 indexes have.

- global ALD with 5 index
global-EXPORTED5.csv

```
Index1;Index2;Index3;Index4;Index5;Data1;Data2;Data3;Data4;Data5;Data6;Data7;Da
ta8;Data9;Data10;Data11;Data12;Data13;
20190330;"A";99730;"CP";1;3;BONIFICACION TERMINAL;1;;;F;L;A;N;;;S;
```

- global ALD with 4 index
global-EXPORTED4.csv

Index1;Index2;Index3;Index4;Data1;Data2;Data3;Data4;Data5;Data6;Data7;Data8;Data9;Data10;Data11;Data12;Data13;Data14;Data15;Data16;Data17;
