InterSystems IRIS Community Edition Now Available On The Docker Store

Hi Community!

We're pleased to announce that that InterSystems IRIS Community Edition is available on the [Docker Store](#) ! InterSystems IRIS Community Edition is the no-cost developer edition designed to lower the barriers to entry to get started with IRIS. Now that it is listed on the Docker Store, running an IRIS Community instance is as easy as -
`docker run -d -p 52773:52773 store/intersystems/iris:2019.1.0.511.0-community`

For more on running IRIS in containers check out our [Documentation](#) or one of the many Community posts on the topic!

The screenshot shows the Docker Hub interface for the 'InterSystems IRIS Data Platform'. At the top is the Docker Hub header with a search bar and 'Explore' and 'Repositories' links. Below the header, the repository card for 'InterSystems IRIS Data Platform' is displayed. It features the InterSystems logo, the title 'InterSystems IRIS Data Platform', and the text 'By InterSystems'. A description reads: 'Complete, cloud-based data platform for SQL and NoSQL DBMS, integration, and analytics.' Below the description are several tags: 'Container', 'Docker Certified', 'Linux', 'x86-64', 'Databases', 'Base Images', and 'Analytics'. At the bottom left of the card is a 'docker CERTIFIED' badge.
