

Atelier Context.xml Missing from Repository

[Connor Shepler](#) 19 April 2019

[Atelier 1.3](#), [Atelier](#)

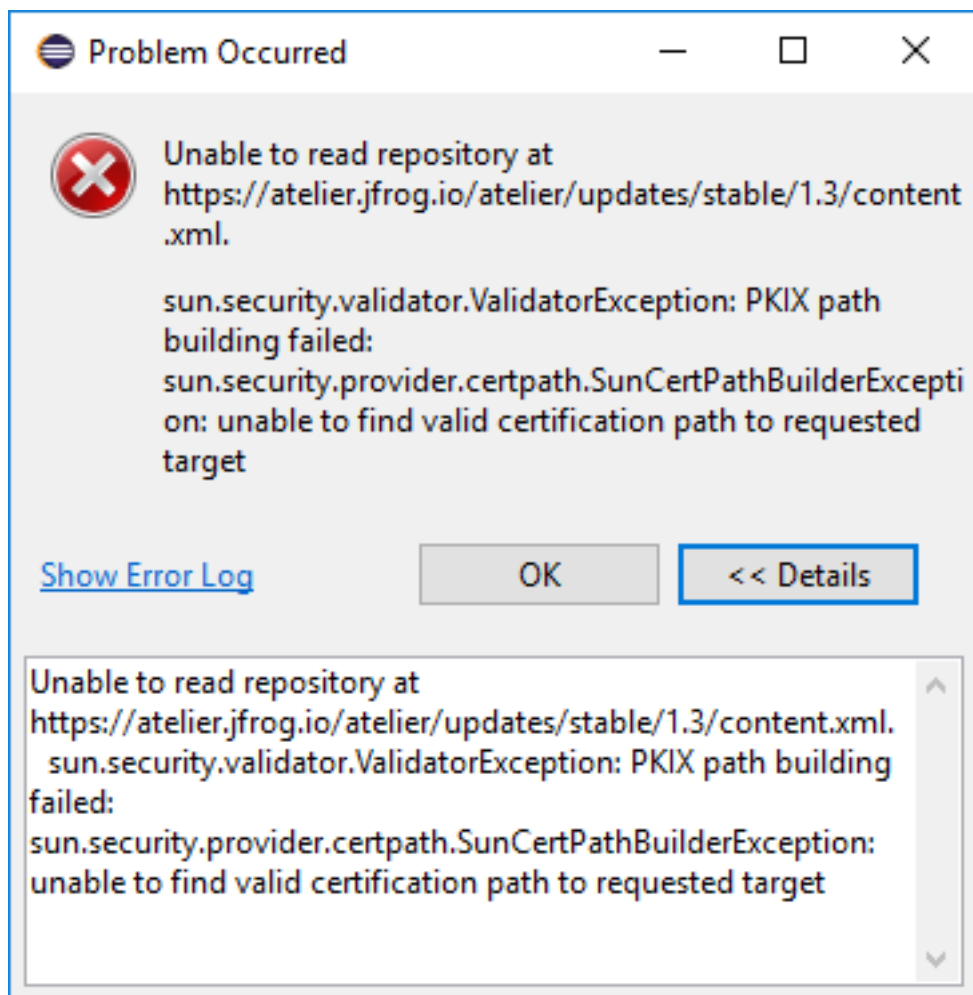

All,

I've been following the " Build your First application with Cache " Learning path and followed to steps for installing the Atelier eclipse plugin.

It appears that the repository for the plugin is missing the "content.xml" file.

Parent Path: <https://atelier.jfrog.io/atelier/updates/stable/1.3/>

File Path (404 not found): <https://atelier.jfrog.io/atelier/updates/stable/1.3/content.xml>

I've followed the guide for modifying the cacerts within the Java 8 jdk here: [LINK](#)
