Search Criteria error

When we go to specific name space to search messages in message viewer, at the moment we are adding the search criteria to add criterion type as SearchTable Field, and clicking the dropdown in Class field, there is an error says below in the image:

6	Search Criteria Create and edit advance	d message search criteria	
	Enable Criterion	Criterion Type SearchTable Field V	Class
	Conditions 🔮 🕢	0	Error retrieving options from server. ERROR #5002: Cache error: zSubclassOfExecute+9^% Dictionary.ClassDefinitionQuery.1 ^rINDEXCLASS ("HS.JSON.WRITER")/cachesys/mgr/HSCUSTOM/
	Display Values	30	
			Cancel OK

Could anyone please let me know what exactly the error is from? Thanks so much.
