## ErrTCPTerminatedReadTimeoutExpired

Hi!

When I try to send a hl7 message via TCP / IP with SSL certificate, I get the following error:

```
ERROR <Ens>ErrTCPTerminatedReadTimeoutExpired: Tiempo de espera de lectura TCP (600)
superado mientras se esperaba el terminador SegTerminatorAscii=13, on |TCP|35000|6596
, datos recibidos =''
```

I have increased the response time to 10 minutes but still, I do not get to receive the message.

As I said in the remote system the process of negotiating the SSL certificate takes about 10 minutes and after that the message appears. I think it's too long. Is there any way to see more traces of the SSL certificate negotiation process in Ensemble?

Framing = MLLP
