## How can I get all values of a setting of a Production item programmatically?

I wish to retrieve all the setting values for a given production. I have found

Set tSC=##class(Ens.Director).GetProductionSettings("EXC.EXC",.tSettings) WHERE EXC.EXC is the name of the Production

My question is

- 1) Does .tSettings contain the settings?
- 2) if yes, how can I show them.
- 3) if no, how do I get the settings values?
