Get parent classname

Hi community.

I need to get the parent classname of a class, but I don't find how to do it.

I have a class Parent (MyLibrary.ParentClass) and two classes inherited from the parent class

```
MyLibrary.ParentClass
```

```
???? MyLibrary.ChilcClass01
```

```
?
```

```
???? MyLibrary.ChildClass02
```

I have a Business Process that entry class is MyLibrary.ParentClass. If I'm calling with any child class (i.e. MyLibrary.ChildClass01) it works, then I'm using the method \$Classname(request) to get the name of the class and redirect to other process.

But I want to check that the request is a class inherited from MyLibrary.ParentClass. How to do it?

Best regards,

Francisco López
