Where are XML Schema Structure stored

Hi everybody,

after importing an XML schema from xsd into Ensemble I'd like to add it to my Studio-Project but can't find the imported schema in the namespace view. For example when working with custom hl7 schema, I could easily add it to my project under namespace view schemaname.hl7. Is this also possible with xml schema? If so where can I find it on an component level?

kind regards,

sebastian
