Autocomplete in Cache Studio Client 2016.2

hi, i am new to Studio and also new to objectscript, but i am not new to programming and

want to implement some synonymfunctions e.g. LOCATE should be used as InStr (.. like in much languages ;o)

more generally spoken, i want to implement a library for my string routines BUT of course i want an need autocomplete.

defining a macro `$$$InStr` does no autocomplete when i type `$$$In<CTRL-SPACE>`

example: my lib is called STRINGS and the functions are: InString, Split, ...

when i type STRINGS. it should autocomplete

i also don't want to write `##class(xxxxx.yyyyy).InString()` every time.

so how can we write less and get most out of autocomplete?

thx, reinhard
