# VSCode-ObjectScript release 0.7.11

Hi all, I have released the latest version of VSCode extension for ObjectScript already a month ago, and finally a time for the info about this new release.

So, what's new in the release:

## What's new in this version

- added export setting "objectscript.export.addCategory" if enabled uses the previous behaviour, adds category folder to export folder, disabled by default
- added Server actions menu, by clicking on server info from status bar. Open Management portal, Class Reference and toggle connection.
- Class Suggestion in ##class, Extends, As, CompileAfter, DependsOn, PropertyClass
- $SYSTEM suggestion by Classes from %SYSTEM
- Import and compile folder or file by context menu in File Explorer
- Server Explorer, now possible to open any other namespace
- Macros suggestion

For details how it works now, look further.

## Intellisense

- Class name  suggestion after Extends keyword

- Class name suggestion after keyword As. Should work in many cases such as with
  - Property

  - Parameter

- Method definition

- and so on.
- Macros usage suggestion name after typing triple dollar $$$

- Special variable $SYSTEM suggestion.

## Other changes

- Import and Compile all files from the File Explorer
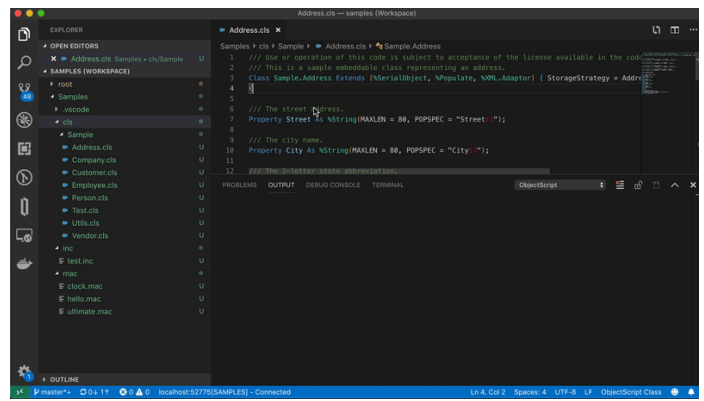

- Server Explorer, view another namespace.

- Go to System Management Portal

- And to Class Reference.

As always fill free to fill [any issues](#) you faced when used [this extension](#), or any new features you would like to see.

If you like my job, you can [donate to me](#) in any preferable way.
