IRIS for Health 2019.2 Released

The 2019.2 version of InterSystems IRIS for Health is now Generally Available!

Container images for IRIS for Health are available via the WRC's [download site](#). The build number for these releases is 2019.2.0.107.0.

InterSystems IRIS for Health 2019.2 is the first CD (continuous delivery) release of IRIS for Health. It has many new capabilities including:

- enhancements to FHIR STU3 support
- additional IHE profiles
- a new JMS (java message service) connector
- Addition of the IRIS Native API for Python and Node.js and relational access for Node.js
- Simplified sharding architecture and flexible sharded schema design
- Support for the new PowerBI connector for InterSystems IRIS
- New look in the Management Portal
- System security, performance, and efficiency enhancements
- Enhancements to the InterSystems Cloud Manager

These are detailed in the IRIS for Health 2019.2 [documentation](#) and [release notes](#).

As this is a CD release, it is only available in OCI (Open Container Initiative) a.k.a. Docker container format. The platforms on which this is supported for production and development are detailed in the [Supported Platforms document](#). For more information on what a CD release is, review the [new release cadence](#) post on InterSystems Developer Community.
